General instructions

\land WARNING

Read the operating instructions!

The operating instructions provide an introduction to the safe use of the products.

- Read and observe the operating instructions for all system components, especially the safety instructions and warning notices!
- Observe the accident prevention regulations and any regional regulations!
- The operating instructions must be kept at the location where the machine is operated.
- Safety and warning labels on the machine indicate any possible risks. Keep these labels clean and legible at all times.
- The machine has been constructed to state-of-the-art standards in line with any applicable regulations and industrial standards. Only trained personnel may operate, service and repair the machine.
- Technical changes due to further development in machine technology may lead to a differing welding behaviour.

In the event of queries on installation, commissioning, operation or special conditions at the installation site, or on usage, please contact your sales partner or our customer service department on +49 2680 181-0.

A list of authorised sales partners can be found at www.ewm-group.com/en/specialist-dealers.

Liability relating to the operation of this equipment is restricted solely to the function of the equipment. No other form of liability, regardless of type, shall be accepted. This exclusion of liability shall be deemed accepted by the user on commissioning the equipment.

The manufacturer is unable to monitor whether or not these instructions or the conditions and methods are observed during installation, operation, usage and maintenance of the equipment.

An incorrectly performed installation can result in material damage and injure persons as a result. For this reason, we do not accept any responsibility or liability for losses, damages or costs arising from incorrect installation, improper operation or incorrect usage and maintenance or any actions connected to this in any way.

2 For your safety

2.1 Notes on using these operating instructions

\land DANGER

Working or operating procedures which must be closely observed to prevent imminent serious and even fatal injuries.

- · Safety notes include the "DANGER" keyword in the heading with a general warning symbol.
- The hazard is also highlighted using a symbol on the edge of the page.

A WARNING

Working or operating procedures which must be closely observed to prevent serious and even fatal injuries.

- Safety notes include the "WARNING" keyword in the heading with a general warning symbol.
- The hazard is also highlighted using a symbol in the page margin.

Working or operating procedures which must be closely observed to prevent possible minor personal injury.

- The safety information includes the "CAUTION" keyword in its heading with a general warning symbol.
- The risk is explained using a symbol on the edge of the page.

Technical aspects which the user must observe to avoid material or equipment damage.

Instructions and lists detailing step-by-step actions for given situations can be recognised via bullet points, e.g.:

Insert the welding current lead socket into the relevant socket and lock.

Safety instructions

• Only further process workpieces after they have cooled down. Do not allow them to contact any flammable materials!

Smoke and gases!

Noise exposure!

Smoke and gases may lead to shortness of breath and poisoning! The ultraviolet radiation of the arc may also convert solvent vapours (chlorinated hydrocarbon) into poisonous phosgene.

- Ensure sufficient fresh air!
- Keep solvent vapours away from the arc beam field!
- Wear suitable respiratory protection if necessary!
- To prevent the formation of phosgene, residues of chlorinated solvents on workpieces must first be neutralised using appropriate measures.

- Noise exceeding 70 dBA can cause permanent hearing damage!
- Wear suitable ear protection!
- Persons located within the working area must wear suitable ear protection!

According to IEC 60974-10, welding machines are divided into two classes of electromagnetic compatibility (the EMC class can be found in the Technical data) > see 8 chapter:

Class A machines are not intended for use in residential areas where the power supply comes from the low-voltage public mains network. When ensuring the electromagnetic compatibility of class A machines, difficulties can arise in these areas due to interference not only in the supply lines but also in the form of radiated interference.

Class B machines fulfil the EMC requirements in industrial as well as residential areas, including residential areas connected to the low-voltage public mains network.

Setting up and operating

When operating arc welding systems, in some cases, electro-magnetic interference can occur although all of the welding machines comply with the emission limits specified in the standard. The user is responsible for any interference caused by welding.

In order to **evaluate** any possible problems with electromagnetic compatibility in the surrounding area, the user must consider the following: (see also EN 60974-10 Appendix A)

- Mains, control, signal and telecommunication lines
- · Radios and televisions
- Computers and other control systems
- · Safety equipment
- The health of neighbouring persons, especially if they have a pacemaker or wear a hearing aid
- Calibration and measuring equipment
- The immunity to interference of other equipment in the surrounding area
- The time of day at which the welding work must be carried out

Recommendations for reducing interference emission

- · Mains connection, e.g. additional mains filter or shielding with a metal tube
- Maintenance of the arc welding system
- Welding leads should be as short as possible and run closely together along the ground
- Potential equalization
- Earthing of the workpiece. In cases where it is not possible to earth the workpiece directly, it should be connected by means of suitable capacitors.
- Shielding from other equipment in the surrounding area or the entire welding system

The power source can create electrical or electromagnetic fields that may impair the function of electronic systems such as EDP and CNC devices, telecommunication, power and signal lines as well as pacemakers and defibrillators.

- Follow the maintenance instructions > see 6 chapter!
- Unwind the welding leads completely!
- Shield radiation-sensitive equipment or facilities appropriately!
- The function of pacemakers may be impaired (seek medical advice if necessary).

For your safety Transport and installation

Obligations of the operator!

The respective national directives and laws must be complied with when operating the machine!

- Implementation of national legislation relating to framework directive 89/391/EEC on the introduction of measures to encourage improvements in the safety and health of workers at work and associated individual guidelines.
- In particular, directive 89/655/EEC concerning the minimum safety and health requirements for the use of work equipment by workers at work.
- The regulations applicable to occupational safety and accident prevention in the country concerned.
- Setting up and operating the machine as per IEC 60974.-9.
- Brief the user on safety-conscious work practices on a regular basis.
- Regularly inspect the machine as per IEC 60974.-4.

The manufacturer's warranty becomes void if non-genuine parts are used!

- Only use system components and options (power sources, welding torches, electrode holders, remote controls, spare parts and replacement parts, etc.) from our range of products!
- Only insert and lock accessory components into the relevant connection socket when the machine is switched off.

Requirements for connection to the public mains network

High-performance machines can influence the mains quality by taking current from the mains network. For some types of machines, connection restrictions or requirements relating to the maximum possible line impedance or the necessary minimum supply capacity at the interface with the public network (Point of Common Coupling, PCC) can therefore apply. In this respect, attention is also drawn to the machines' technical data. In this case, it is the responsibility of the operator, where necessary in consultation with the mains network operator, to ensure that the machine can be connected.

2.4 Transport and installation

Risk of injury due to improper handling of shielding gas cylinders! Improper handling and insufficient securing of shielding gas cylinders can cause serious injuries!

- Observe the instructions from the gas manufacturer and any relevant regulations concerning the use of compressed air!
- Do not attach any element to the shielding gas cylinder valve!
- Prevent the shielding gas cylinder from heating up.

R

	I ransport and installation
→ ©⊅-	Risk of accidents due to supply lines!During transport, attached supply lines (mains leads, control cables, etc.) can causerisks, e.g. by causing connected machines to tip over and injure persons!• Disconnect all supply lines before transport!
A	Risk of tipping! There is a risk of the machine tipping over and injuring persons or being damaged itself during movement and set up. Tilt resistance is guaranteed up to an angle of 10° (ac- cording to IEC 60974-1).
	 Set up and transport the machine on level, solid ground. Secure add-on parts using suitable equipment.
ý?	 Risk of accidents due to incorrectly installed leads! Incorrectly installed leads (mains, control and welding leads or intermediate hose packages) can present a tripping hazard. Lay the supply lines flat on the floor (avoid loops).
<u> </u>	 Avoid laying the leads on passage ways. Risk of injury from heated coolant and its connections! The coolant used and its connection or connection points can heat up significantly during operation (water-cooled version). When opening the coolant circuit, escaping
	 coolant may cause scalding. Open the coolant circuit only when the power source or cooling unit is switched off! Wear proper protective equipment (protective gloves)! Seal open connections of the hose leads with suitable plugs.
Operat	its are designed for operation in an upright position! ion in non-permissible positions can cause equipment damage. y transport and operate in an upright position!

- Accessory components and the power source itself can be damaged by incorrect connection!
 - Only insert and lock accessory components into the relevant connection socket when the machine is switched off.
 - Comprehensive descriptions can be found in the operating instructions for the relevant accessory components.
 - Accessory components are detected automatically after the power source is switched on.
- *Protective dust caps protect the connection sockets and therefore the machine against dirt and damage.*
 - The protective dust cap must be fitted if there is no accessory component being operated on that connection.
 - The cap must be replaced if faulty or if lost!

Applications

3 Intended use

§

\land WARNING

Hazards due to improper usage!

The machine has been constructed to the state of the art and any regulations and standards applicable for use in industry and trade. It may only be used for the welding procedures indicated at the rating plate. Hazards may arise for persons, animals and material objects if the equipment is not used correctly. No liability is accepted for any damages arising from improper usage!

- The equipment must only be used in line with its designated purpose and by trained or expert personnel!
- Do not improperly modify or convert the equipment!

3.1 Applications

Welding fume extractor torch for arc welding machines for GMAW.

3.2 Documents which also apply

3.2.1 Warranty

For more information refer to the "Warranty registration" brochure supplied and our information regarding warranty, maintenance and testing at <u>www.ewm-group.com</u>!

3.2.2 Declaration of Conformity

This product corresponds in its design and construction to the EU directives listed in the declaration. The product comes with a relevant declaration of conformity in the original.

The manufacturer recommends carrying out the safety inspection according to national and international standards and guidelines every 12 months (from commissioning).

3.2.3 Service documents (spare parts)

MARNING

No improper repairs and modifications!

To prevent injuries and damage to the machine, only competent personnel (authorised service personnel) are allowed to repair or modify the machine. Unauthorised manipulations will invalidate the warranty!

• Instruct competent personnel (authorised service personnel) to repair the machine.

Spare parts can be obtained from the relevant authorised dealer.

3.2.4 Part of the complete documentation

This document is part of the complete documentation and valid only in combination with all other parts of these instructions! Read and observe the operating instructions for all system components, especially the safety instructions!

The illustration shows a general example of a welding system.

5 Design and function

5.1 General

Welding wire can be conveyed at very high speeds and, if conveyed incorrectly, may es-

- cape in an uncontrolled manner and injure persons!
 Before mains connection, set up the complete wire guide system from the wire spool to the welding torch!
 - Check wire guide at regular intervals!
 - Keep all casing covers or protective caps closed during operation!
- To prevent damage to the fume extraction torch, never operate it without the extraction nozzle.
- **Accessory components and the power source itself can be damaged by incorrect connection!**
 - Only insert and lock accessory components into the relevant connection socket when the machine is switched off.
 - Comprehensive descriptions can be found in the operating instructions for the relevant accessory components.
 - Accessory components are detected automatically after the power source is switched on.
- *Protective dust caps protect the connection sockets and therefore the machine against dirt and damage.*
 - The protective dust cap must be fitted if there is no accessory component being operated on that connection.
 - The cap must be replaced if faulty or if lost!
- Machine damage due to incompletely assembled welding torch! Incomplete assembly may destroy the welding torch.
 - Always assemble the welding torch completely.
- After each opening of the welding torch, using the "gas test" "gas flush" function and increased flow rates, remove moisture, atmospheric oxygen and any impurities from the welding torch.
- Do not twist the hose package to no end in one direction so as to prevent damage to the fume extraction torch and the torch hose package. It is necessary to untwist the hose package regularly

Scope of delivery

5.2 Scope of delivery

The delivery is checked and packaged carefully before dispatch, however it is not possible to exclude the possibility of damage during transit.

Receiving inspection

• Check that the delivery is complete using the delivery note!

In the event of damage to the packaging

· Check the delivery for damage (visual inspection)!

In the event of complaints

If the delivery has been damaged during transport:

- Please contact the last haulier immediately!
- Keep the packaging (for possible checking by the haulier or for the return shipment).

Packaging for returns

If possible, please use the original packaging and the original packaging material. If you have any queries on packaging and protection during transport, please contact your supplier.

5.3 Transport and installation

Risk of accidents due to supply lines!

During transport, attached supply lines (mains leads, control cables, etc.) can cause risks, e.g. by causing connected machines to tip over and injure persons!

Disconnect all supply lines before transport!

5.3.1 Ambient conditions

Nachine damage due to contamination!

Unusually high amounts of dust, acid, corrosive gas or substances may damage the machine (note the maintenance intervals > see 6.1.3 chapter).

• Prevent high amounts of smoke, weld spatter, steam, oil vapour, grinding dust and corrosive ambient air from developing!

In operation

Temperature range of the ambient air:

• -10 °C to +40 °C (-13 F to 104 F) [1]

Relative humidity:

- up to 50 % at 40 °C (104 F)
- up to 90 % at 20 °C (68 F)

Transport and storage

Storage in a closed area, temperature range of the ambient air:

• -25 °C to +55 °C (-13 F to 131 F) ^[1]

Relative humidity

- up to 90 % at 20 °C (68 F)
- ^[1] Ambient temperature dependent on coolant! Observe the coolant temperature range of the torch cooling

Configure welding torch

5.4 Configure welding torch

MARNING

Risk of burns and electric shock on the welding torch!

Welding torch (torch neck or torch head) and coolant (water-cooled version) heat up strongly during the welding process. During assembly work, you may come into touch with electrical voltage or hot components.

- Wear proper protective equipment!
- I Switch off the power source or torch cooling and allow the welding torch to cool!

Switch off the extraction system.

Figure 5-1

ltem	Symbol	Description
1		Extraction nozzle
2		Torch key > see 9 chapter
3		Grip plate
4		Gas distributor
5		Contact tip holder
6		Contact tip
7		Gas nozzle

- Loosen the extraction nozzle by hand.
- Unscrew the gas nozzle anti-clockwise by hand.
- Loosen the contact tip and contact tip holder with the torch key > see 5.4.1 chapter.
- Unscrew the gas diffuser by hand.

Comply with the permissible tightening torques to prevent damage to the torch and ensure correct attachment and contact tip contact > see 8 chapter!

• Assemble by following these steps in the reverse order

Design and function

Configure welding torch

5.4.1 Using the torch key

To prevent torch damage, carried out the assembly in a clockwise direction and disassembly in an anti-clockwise direction.

5.4.1.1 Contact tip

The illustration serves as an example only.

• When assembling and disassembling the contact tip, use the corresponding slot weld of the torch key.

5.4.1.2 Contact tip holder

The illustration serves as an example only.

• When assembling and disassembling the contact tip holder, use the appropriate hexagon on the torch key.

5.6 Adapting the Euro torch connection on the device

On delivery, the Euro torch connector on the wire feeder is fitted with a capillary tube for welding torches with a steel liner!

5.6.1 Liner

- Push forward the capillary tube on the wire feed side in the direction of the Euro torch connector and remove it there.
- Insert the guide tube from the Euro torch connection.
- Insert the welding torch connector with the excessively long liner carefully into the Euro torch connector and screw hand-tight using the crown nut.
- Cut off the liner using a special cutter or sharp knife just before the wire feed roller, making sure not to pinch it.
- Loosen the welding torch connector and remove.
- Cleanly trim the separated end of the liner!

5.6.2 Guide spiral

• Check the Euro torch connector for correct seating of the capillary tube!

5.6.3 Assemble the wire guide

Use the correct wire guide from spool to molten pool!

The wire guide has to be adjusted to the wire electrode type and diameter in order to achieve good welding results!

- Equip the wire feeder according to wire electrode type and diameter!
- Refer to the manufacturer instructions for the right wire feed unit equipment. Refer to Annex 1 in these operating instructions for the right EWM machine equipment > see 10 chapter.
- Use a steel liner inside the torch hose package to guide hard, unalloyed wire electrodes (steel)!
- Use a plastic liner inside the torch hose package to guide soft or alloyed wire electrodes!

Equipment side for steel liner or liner > see 5.5 chapter.

5.6.3.1 Liner

Observe permissible torque > see 8 chapter!

The distance between the plastic liner and drive rollers should be as short as possible. Use only sharp, stable knives or special tongs for cutting to ensure that the plastic liner does not become misshapen!

Always make sure the hose package is straight when replacing the wire guide. The illustration serves as an example only.

5.7 Setting the welding smoke flow rate

5.7.1 Test preparation

- Before checking the flow rate, it is necessary to measure the amount of shielding gas.
- The quantity of shielding gas is measured at the gas nozzle of the welding torch and is set either directly on the pressure regulator or, if available, on the gas control unit of the wire feeder or power source.
- Connect the welding torch to the welding machine or wire feeder.
- Connect the welding fume extractor hose to the welding torch using an adapter > see 8 chapter.
- Connect the welding fume extractor hose to the extraction system
- The welding smoke flow rate can be influenced by using the bypass slider.

The illustration serves as an example only.

8		O-ring for floats
9		Float
10		Measuring tube

5.7.2 Checking the flow rate of the welding fumes

- Setting values of the welding smoke flow rate > see 8 chapter.
- Calculate the welding smoke flow rate as a function of the altitude > see 12.1 chapter.
- Insert the welding fume extractor torch with the welding fume extraction nozzle installed vertically from above as far as it will go into the nozzle holder of the airflow meter.
- The airflow meter must also be held with one hand at the top (green ticks).
- The intake opening at the bottom must not be covered by fingers or a hand (red cross).
- The minimum distance between the airflow meter and an object should be at least 50 cm / 19.7 inches.
- The openings of the welding fume extraction nozzle must not be clogged and must be free of dirt.
- The openings of the extraction nozzle must be located completely inside the airflow meter and must not be covered by the diaphragm grommet of the nozzle holder.
- Note the installation direction of the floater. The O-ring of the floater must point downwards.
- The welding fume extraction nozzle of the welding fume extractor torch must sit precisely in the airflow meter.
- Close the bypass slider on the welding fume extractor torch.
- Switch on the filter and extraction system.
- The welding smoke flow rate is indicated at the centre of the O-ring of the floater, on the scale of the airflow meter's measuring tube.
- Readjust the welding fume flow rate on the controller of the extraction system until the specified value Q_{vn} and the displayed value match.

ewm

5.8 Functional characteristics

5.8.1 General

A usable MIG/MAG welding torch consists of: Tube package, handle and torch neck with the relevant fittings and consumable parts.

All elements together form a functional unit which, supplied with the relevant operating materials, generates an arc for welding. For welding, a wire electrode is fed through the tube package and the welding torch. The arc and molten pool are shielded using inert gas (MIG) or active gas (MAG).

The wire electrode is a melting solid or cored wire which is conveyed through the contact nozzle. The contact nozzle transfers the welding current onto the wire electrode. The arc is formed between the wire electrode and workpiece. The welding torches are gas or fluid cooled depending on the version. The tube package is equipped accordingly.

The torch button on the MIG welding torch is normally used for starting and stopping the welding process. The operating elements on the UP/DOWN torch and POWERCONTROL torch provide additional functions over and above those of a standard torch.

5.8.2 Welding fume extractor

Smoke and gases!

Smoke and gases may cause shortness of breath and poisoning. The ultraviolet radiation of the arc may also convert solvent vapours (chlorinated hydrocarbon) into poisonous phosgene.

- Ensure the continuous operation of the extraction system.
- The bypass slider must normally be closed.
- To reach critical points of a welding process, the bypass slider may be opened briefly.

All components on the fume extraction torch must be mounted in the correct position and good condition. No components may be removed. The bypass slider must normally be closed and may only be opened briefly in critical welding positions to prevent pore formation.

The extraction power must be determined > see 12.1 chapter and set > see 5.7 chapter . An extraction value that is too low involves the risk that the welding fumes will not be extracted optimally.

An extraction value that is too high involves the risk that shielding gas will be unintentionally extracted from the weld seam.

Removing the extraction nozzle during welding leads to a reduction in welding smoke capture. As a result, the welding torch no longer conforms to the standard and the performance specifications in the technical data.

6 Maintenance, care and disposal

6.1 General

4

4

- Risk of injury due to electrical voltage after switching off!
 - Working on an open machine can lead to fatal injuries!
 - Capacitors are loaded with electrical voltage during operation. Voltage remains present for up to four minutes after the mains plug is removed.
 - 1. Switch off machine.
 - 2. Remove the mains plug.
 - 3. Wait for at last 4 minutes until the capacitors have discharged!

Improper maintenance, testing and repairs!

Maintenance, testing and repair of the machine may only be carried out by skilled and qualified personnel (authorised service personnel). A competent person is someone who, based on training, knowledge and experience, can recognize the hazards and possible consequential damage that may occur when testing power sources and can take the necessary safety precautions.

- Follow the maintenance instructions > see 6.1.3 chapter.
- If any of the test requirements below are not met, the unit must not be put back into operation until it has been repaired and tested again.

Repair and maintenance work may only be performed by qualified authorised personnel; otherwise the right to claim under warranty is void. In all service matters, always consult the dealer who supplied the machine. Return deliveries of defective equipment subject to warranty may only be made through your dealer. When replacing parts, use only original spare parts. When ordering spare parts, please quote the machine type, serial number and item number of the machine, as well as the type designation and item number of the spare parts.

The welding torch is one of the most stressed components of the welding system. Due to the high thermal load and contamination, regular maintenance and care not only extends the service life of the system but also saves costs in the long term through the use of fewer replacement parts and less downtime. Perfect welding results can only be achieved with a properly maintained welding torch.

For maintenance and care, use only the tools, aids and tightening torques specified in the operating instructions.

6.1.1 Identifying damage or worn components

Contact tip

- Oval, ground bore at the wire outlet
- Clinging weld spatter that can no longer be removed
- · Penetration or burn-off at the contact tip
- · Contact tip that sits eccentrically

Gas nozzle

- Clinging weld spatter, deformation, notches, penetration and damaged threads
- The O-ring of the gas nozzle holder is worn (for water-cooled welding torches)

Gas diffuser

Clogged bores, cracks, burnt-off outer edges

Contact tip holder

• The key flat is defective or worn, thread damaged, clinging weld spatter

Torch head

The thread is defective or worn

General

Euro torch connector

- The O-ring of the connecting nipple for shielding gas is defective or worn
- The spring pins of the torch trigger are bent, jammed or dirty
- The thread of the crown nut is dirty or damaged
- · For water-cooled welding torches, check the coolant connections for damage

Grip

Cracks, penetration

Hose package

- Cracks, penetration
- **To prevent damage to and malfunction of the welding torch and hose package:**
 - Never strike hard objects (hammering)!
 - Do not use the welding torch for levering or straightening!
 - Do not bend the torch neck! Bending flexible torch necks is possible considering the maximum bending cycles.
 - Do not twist the hose package to no end in one direction. It is necessary to untwist it regularly.
 - During breaks or after work, place the welding torch in the torch holder provided on the welding machine or at the workplace!
 - Never throw the welding torch!
 - Do not pull welding machines / wire feeders with the welding torch!

Figure 6-1

6.1.2 Maintenance and care before each use

Welding spatter protection spray must not be used on the gas nozzle of the welding fume extractor torch or other components. The aerosols clog the filters of the extraction system.

- Loosen the gas nozzle, check the replacement parts for damage, replace if necessary and ensure a tight fit.
- Clean and remove soiling and welding spatter from the welding torch and, particularly, the wear parts; replace any worn or defective parts, if necessary.
- Check the O-rings on the torch neck and Euro torch connector for damage and presence. Replace defective O-ring.
- For water-cooled welding torches, check for leaks / flow in the coolant connections and the coolant level on the cooling unit.
- Check the grip and hose package for cracks and damage.

6.1.3 Regular maintenance

The regular maintenance of a welding torch depends heavily on the duration of use and the stress and must be specified by the operator / owner. As a rule of thumb, every time the wire spool or wire basket is replaced or, if necessary, at a change of shift.

Figure 6-3

- Disconnect the welding torch from the machine, remove the replacement parts and blow out the wire duct and gas connection of the torch alternately with compressed air (max. 4 bar) free of oil and condensed water.
- Mount the replacement parts, connect the welding torch to the machine and purge twice with shielding gas (gas test).
- Check the liner or steel liner for damage and replace if necessary.
- Check the coolant container for sludge deposits and check the coolant for cloudiness. Clean the coolant container if contaminated, and change the coolant.
- If the coolant is dirty, rinse through the welding torch alternately several times with fresh coolant using the coolant return and supply.
- Check the screw and plug connectors of connections for proper seating and tighten if necessary.

6.2 Disposing of equipment

Proper disposal!

The machine contains valuable raw materials, which should be recycled, and electronic components, which must be disposed of.

- Do not dispose of in household waste!
- Observe the local regulations regarding disposal!

In addition to the national or international regulations mentioned below, it is mandatory to follow the respective national laws and regulations on disposal.

According to European provisions (Directive 2012/19/EU on Waste of Electrical and Electronic Equipment), used electric and electronic equipment may no longer be placed in unsorted municipal waste. It must be collected separately. The symbol depicting a waste container on wheels indicates that the equipment must be collected separately.

This machine has to be disposed of, or recycled, in accordance with the waste separation systems in use.

According to German law (law governing the distribution, taking back and environmentally correct disposal of electrical and electronic equipment (ElektroG)), used machines are to be placed in a collection system separate from unsorted municipal waste. The public waste management utilities (communities) have created collection points at which used equipment from private households can be disposed of free of charge.

The deletion of personal data is the responsibility of the end user.

Lamps, batteries or accumulators must be removed and disposed of separately before disposing of the device. The type of battery or accumulator and its composition is marked on the top (type CR2032 or SR44). The following EWM products may contain batteries or accumulators:

Welding helmets

Batteries or accumulators are easy to remove from the LED cassette.

Device controls

Batteries or accumulators are located on the back of these in corresponding sockets on the circuit board and are easy to remove. The controls can be removed using standard tools.

Information on returning used equipment or collections can be obtained from the respective municipal administration office. Devices can also be returned to EWM sales partners across Europe.

Further information on the topic of the disposal of electrical and electronic equipment can be found on our website at: https://www.ewm-group.com/de/nachhaltigkeit.html.

7 Rectifying faults

All products are subject to rigorous production checks and final checks. If, despite this, something fails to work at any time, please check the product using the following flowchart. If none of the fault rectification procedures described leads to the correct functioning of the product, please inform your authorised dealer.

7.1 Checklist for rectifying faults

The correct machine equipment for the material and process gas in use is a fundamental requirement for perfect operation!

Legend	Symbol	Description
	×	Fault/Cause
	*	Remedy

Welding torch overheated

- ✗ Loose welding current connections
 - lpha Tighten power connections on the torch and/or on the workpiece
 - ★ Tighten contact tip correctly
- ✓ Overload
 - ℜ Check and correct welding current setting
 - ℜ Use a more powerful welding torch
- ✓ High welding fume load
 - \boldsymbol{x} Reduce the welding fume extraction rate.
 - ☆ Clean the welding torch.
 - \star If necessary, close the bypass slider on the welding torch.
 - ✤ Properly attach the extraction nozzle and extraction hose and check for leak-tightness.
 - ✤ The extraction nozzle openings must be free of deposits.
 - ***** Ensure that the extraction system is switched on.
 - * Check the extraction system filter and replace it if saturated.

Wire feed problems

- ✗ Unsuitable or worn welding torch equipment
 - ★ Adjust contact tip to wire diameter and -material and replace if necessary
 - ★ Adjust wire guide to material in use, blow through and replace if necessary
- ✗ Kinked hose packages
 - ✤ Extend and lay out the torch hose package
- ✗ Incompatible parameter settings
 - ℜ Check settings and correct if necessary
- ✗ Contact tip blocked
 - ℜ Clean and, if necessary, replace.
- ✗ Setting the spool brake
 - ℜ Check settings and correct if necessary
- ✗ Setting pressure units
 - ℜ Check settings and correct if necessary
- ✗ Worn wire rolls
 - ℜ Check and replace if necessary
- ✓ Wire feed motor without supply voltage (automatic cutout triggered by overloading)
 - * Reset triggered fuse (rear of the power source) by pressing the key button
- ✗ Wire guide core or spiral is dirty or worn
 - * Clean core or spiral; replace kinked or worn cores
- ✓ Arc between gas nozzle and workpiece (metal vapour on the gas nozzle)
 - 🛠 Replace gas nozzle
 - ☆ Clean the gas nozzle, contact tip, contact tip holder and gas diffuser and replace if they are worn.

Unstable arc

- ✗ Unsuitable or worn welding torch equipment
 - * Adjust contact tip to wire diameter and -material and replace if necessary
 - ✿ Adjust wire guide to material in use, blow through and replace if necessary
- ✗ Incompatible parameter settings
 - \boldsymbol{x} Check settings and correct if necessary

Pore formation

- ✗ Inadequate or missing gas shielding
 - ★ Check shielding gas setting and replace shielding gas cylinder if necessary
 - Shield welding site with protective screens (draughts affect the welding result)
 - lpha Use gas lens for aluminium applications and high-alloy steels
 - * Check the welding smoke flow rate using an airflow meter and if necessary correct
 - **%** Depending on the application, reduce the welding fume flow rate using the bypass slider.
- ✗ Unsuitable or worn welding torch equipment
 - ℜ Check size of gas nozzle and replace if necessary
 - \boldsymbol{x} Check the O-ring on the Euro torch connector and if necessary replace.
- \checkmark Condensation in the gas tube
 - \boldsymbol{x} Purge hose package with gas or replace

10 Replaceable parts

- The manufacturer's warranty becomes void if non-genuine parts are used!
 - Only use system components and options (power sources, welding torches, electrode holders, remote controls, spare parts and replacement parts, etc.) from our range of products!
 - Only insert and lock accessory components into the relevant connection socket when the machine is switched off.

The circuit diagrams are only intended for authorised service personnel!

Figure 11-1

12 Appendix

12.1 Altitude alignment

The higher the altitude, the less vacuum is required at the connection piece Δpc of the welding torch to achieve the required welding fume flow rate at the welding nozzle. Determine the corresponding factor in the following table:

 $P_{c user}(Z) = f x \Delta_{pc}$

ı

Explanation:

Pc _{user} (Z)	Required vacuum connector	
f	Factor (determined in the following table)	
Δpc	Vacuum connector > see 8 chapter	
Altitude Z in (m)		Factor f
0		1.00
250		0.97
500		0.94
750		0.91
1000		0.89
1250		0.86
1500		0.83
1750		0.81
2000		0.78
2250		0.76
2500		0.74
